DETAILED ACTION

1. The amendment filed on 27 December 2004 has been noted and made of record.
2. Claims 1-30 have been presented for examination.

Response to Arguments

3. Applicant's arguments, see pages 13 and 14, filed 27 December 2004, with respect to claims 1-30 have been fully considered and are persuasive. The rejection of claims 1-30 has been withdrawn.

Allowable Subject Matter

4. The following is an examiner's statement of reasons for allowance:

As per claims 1-30, it is well known in the art for generating an intermediate shared secret key by issuing communications to a second node of the network; receiving an individual public key from the third node; and computing and storing the group shared secret key based upon the individual public key.

5. There are no teachings or motivation in the prior art of sending a first private value associated with the first node to the second node, and receiving from the second node a second private value associated with the second node using the intermediate shared secret key; generating and communicating a collective public key that is based upon the first private value and the second private value to a third node of the network. Since no teachings or motivation can be found of sending a first private value associated with the first node to the second node, and receiving from the second node a second private value associated with the second node using the intermediate shared secret key; generating and communicating a collective public key that is

based upon the first private value and the second private value to a third node of the network, or the combination of the steps set forth above, claims 1-30 are therefore novel and non-obvious.

6. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

8. The following patents are cited to further show the state of the art with respect to key distribution, such as:

United States Patent No. 6,785,809 to Hardjono, which is cited to show server group key for distributed group key management.

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Christian La Forgia whose telephone number is (571) 272-3792. The examiner can normally be reached on Monday thru Thursday 7-5.
